Research Interests:

Emotional factors in human communication and social behavior. Nonverbal sending accuracy: Gender and personality differences, relationships with right vs. left hemisphere brain functions. Brain mechanisms of emotion and motivation, including Reptilian and Prosocial emotions. Social development of emotion expression: Overt, nonverbal, cognitive, and physiological aspects: emotional education and competence.

Evolution of social structure via communication: communicative gene hypothesis. Emotional expressiveness, trustworthiness, and altruism.

Higher-level social, cognitive, and moral emotions as aspects of self-organizing dynamical systems emerging from experience and social interaction, and their biological bases.

Reason and emotion in persuasion, media and emotion, leadership and charisma, advertising effects, emotional aspects of warning labeling, emotional aspects of effective safe sex messages.

Nonverbal receiving ability: Empathy, social perception/attribution.

Social bio-regulation: social relationships as stress-buffers (and enhancers). Emotional and cognitive factors in human adaptation, including the relationships of emotional expression, stress, immune system functioning, and disease (cancer, cardiovascular disease, psychosomatic illness).
